EXPERIENCE

The Rust Foundation

Google Summer of Code Contributor

05/2024 - 09/2024

- For Google's Summer of Code, designed and implemented granular configuration to Rust's [cargo-semver-checks](#).
- Helped increase downloads by 64% and ensure better SemVer compliance in the Rust ecosystem.
- Focused on code correctness, futureproof design, and thorough testing and documentation
- Improved the project's test infrastructure to easily express new classes of tests, letting 10+ new test cases be written.
- Embraced the open-source community and its feedback, and wrote devlogs, such as my [final write-up](#).

Baskin School of Engineering

Santa Cruz, CA

CSE Group Tutor & Reader

03/2024 - Present

- Tutored students in upper-division computer science: found their misconceptions and gave targeted feedback.
- Graded and gave timely and relevant feedback on homework assignments.

EDUCATION

University of California, Santa Cruz

Santa Cruz, CA

Computer Science, B.S., and Mathematics: Theory of Computation, B.S.

09/2023 - Present

- **GPA:** 3.97
- **Relevant Courses:** Data Structures & Algorithms, Computer Architecture, Computational Models, Compiler Design, Operating Systems, Programming Languages, (Graduate-level) Formal Methods
- **Dean's List:** Fall 2023, Winter 2024, Spring 2024

Foothill College

Los Altos Hills, CA

GPA: 4.00

03/2022 - 06/2023

Branham High School

San Jose, CA

GPA: 4.44

08/2019 - 06/2023

- Perfect Score, AP Computer Science A (0.47% of all test-takers internationally).

PROJECTS

scrapelect

[🐙/scrapelect](#)

- Created an open-source domain-specific language to easily extract structured (JSON) data from a web page without the boilerplate of web scraping tools.
- Designed and formally defined the language, and implemented a parser, interpreter, and REPL in Rust.
- Developed thorough unit and integration tests, and deployed a CI/CD pipeline using GitHub Actions
- Extensively documented functionality for both developers and [users](#) to foster collaboration and improve ease of use.

Clime

[🐙/clime](#)

- Created a full-stack web application for university applicants to view and compare real-time and historical weather data for different universities, with a user-customizable dashboard and university statistics.
- Developed a multithreaded, asynchronous backend with Rust & PostgreSQL with user accounts and a REST API.
- Designed a fast, reactive frontend with Svelte + TypeScript with a responsive, mobile-friendly user interface.

Sammy Support Crew

[DevPost](#) | [🐙](#)

Winner: Best AI Hack, CruzHacks '24

- Created an AI-powered chatbot network that lets students easily find the right support resources.
- Led and managed a team of 4, and set up repository and development environment for collaboration.
- Developed the reactive frontend SPA using Svelte + TypeScript.
- Designed the asynchronous backend REST API which uses Express + TypeScript and the OpenAI API.

TECHNICAL SKILLS

- **Languages:** Rust, C++, C, TypeScript, JavaScript (Svelte, Vue), Python, Java, HTML, CSS
- **Technologies:** Linux, Git, GitHub & Open Source, Docker, SQL/Databases, CI/CD, Unit Testing, Documentation
